

Water recycling program implementation

Description:

Walailak University has a water recycling program that can treat waste water of 700-1,500 cubic meter per day. Around 490 - 1,050 cubic meter per day of treated water is utilized for the following activities.

1. Watering trees and flowers in the vicinity of the constructed wetland by means of pumping systems and sprinkler.
2. Watering trees along the road and around the campus, which requires small amount of water due to the rainy condition in the south of Thailand.
3. Fish farming with treated water that passes quality control
4. Washing university-owned cars
5. Cleaning roads on the campus

6. Cooling water for incinerator
